

ASTM A513

Mechanical tube produced to A513 might just be the most versatile of all the tubing products. Used in products ranging from industrial to agriculture to consumer goods, A53 is the workhorse of tubing products.

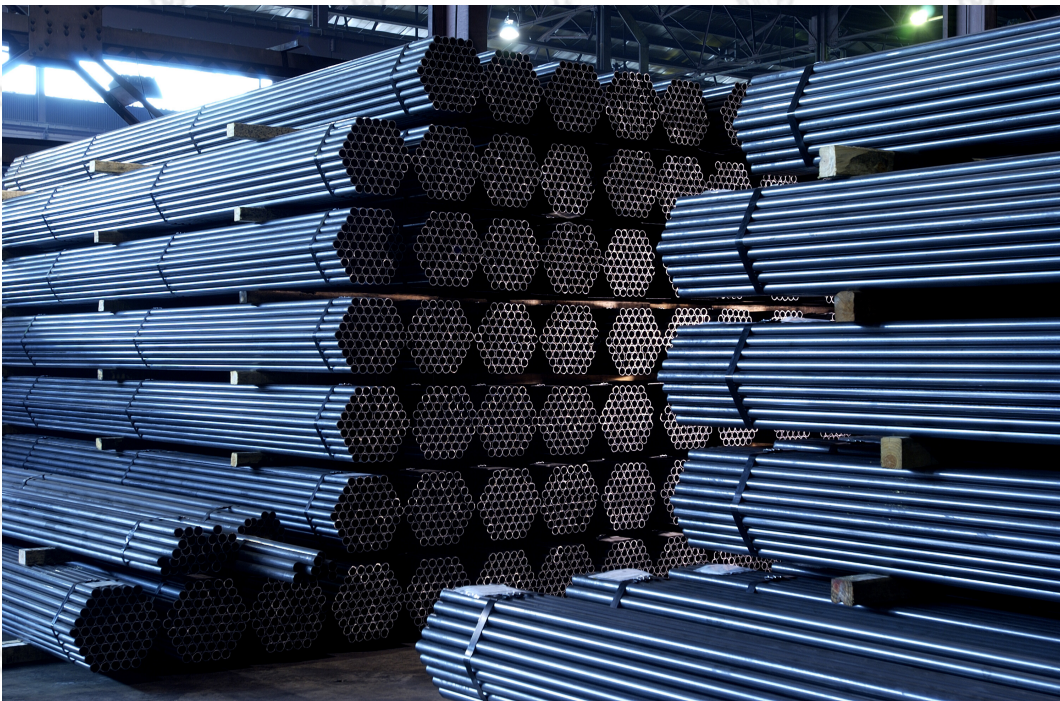

When dealing with the smaller size of A513, precision is key. At our Birmingham, Alabama location, we manufacture mechanical tube from as small as ½" square up to as large as 4" rectangular with rounds ranging from 1" to 2" OD. Our tight tolerances and attention to wall thickness are two aspects that set our A513 apart from the competition.

Birmingham Size Range:

Squares: ½" SQ x 16 GA through 3" SQ x 14 GA

Rectangles: 1 ½" x 1" x 16 GA through 4" x 2" x 14 GA

Rounds: 1" OD x 16 GA through 2" OD x 14 GA
